

## Portrait of HiFarm lead farmer **John Stone Sang**

Mister John Stone Sang is a maize and dairy farmer in Molo. From June 2021 he has been working with the HiFarm project team, together with his wife and another worker. The farm is benefiting from the advisory of the HiFarm soil experts as well as from two Agropilots.

**“I am happy, the project assists us to use the inputs and to test the soil... We are adapting!”**

The HiFarm team has been visiting the farm of Mister Stone regularly. He appreciates the close cooperation and learning about land preparation and crop growing practices; like how and when to apply the right fertilizers. The HiFarm knowledge exchange meeting has also been valuable. It helped him get a deeper understanding of soil treatment. Mr. Stone likes the maps from the drones that, together with the advisory from the AgroPilots, are useful for his field management.

-  Molo, Nakuru, Kenya
-  Maize and dairy
-  9 acres
-  44 years

### Personal project goals

-  Increase productivity
-  More efforts in land preparation, weeding, crop treatment
-  Adopt new practices on the long term
